Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Response to Arguments

1. Applicant's arguments with respect to claims 12-14 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 12-14 are rejected under 35 U.S.C. 102(b) as being anticipated by Junqua et al. (5,640,488).

Regarding claim 12, Junqua et al. discloses (Fig. 3) a method of sorting words/input data, wherein the method comprises a set of words (Junqua et al. uses the term "entries" – 22 of Fig. 3), wherein the set of words is sorted (by the rule base 62) into partitions (or groups 32...36), and wherein each partition/group having a common starting character (beginning letter) is sorted by length of the words (each block 32...36 comprises groups/partitions having same length and beginning letter/character), and wherein each group/partition is identified by the common starting character and word length; and an index (30 of Fig. 3), wherein a starting location for each partition is stored.

Regarding claim 13, Junqua et al. discloses (Fig. 3) a method used for constructing a dictionary word list in a data compressor, comprising in a first computer

Art Unit: 2819

the step of: determining a set of words (22 - entries) that are included in a dictionary word list (20); sorting each subset of words having common starting character by lengths of the words (62), wherein each subset of the set of words that was sorted or grouped by one of the lengths is name a partition (32...36) and is identified by the common starting character (same beginning letter) and the one of the lengths; storing each partition/group at a starting location in memory; and storing an index of the starting locations for each common starting character and the ones of the lengths (30 of Fig. 3).

Regarding claim 14, Junqua et al. discloses the step of sorting each set of words having a common starting character by lengths of the words (same length and same beginning letter), the lengths of the words start at a minimum length (smallest length) and end at a maximum length (largest length) and include all integral lengths (blocks 33-35 between blocks 32 and 36 as seen in Fig. 3) from the minimum to the maximum length and wherein all words that are as long as, or longer than, the maximum length are in one partition/group (column 4, lines 53-58).

3. Claim 15 is allowed.
